

WE ARE HIRING!

Junior Research Associate - Genomics

SLIBTEC is a high-tech ecosystem fostering innovation through cutting-edge technologies, dedicated facilities, and a vibrant research culture. It provides a linear research, development and manufacturing platform for the biotechnology business.

Launch Your Career at the Frontier of Genomics!

Are you passionate about

Genetics, Molecular Biology, and Genomic Technologies?

Looking for the perfect opportunity to build your expertise in cutting-edge sequencing techniques?

Join Our Team and Shape the Future of Genomics

As a Junior Research Associate, you will gain hands-on experience with:

- Next Generation Sequencing (NGS)
- Sanger Sequencing
- Exome Sequencing

Work alongside world-class scientists in a dynamic, collaborative research environment where innovation and discovery are part of everyday life.

What You'll Gain

- Practical training in advanced sequencing technologies
- Exposure to real-world genomics research projects
- Mentorship from experienced scientists
- Experience with state-of-the-art laboratory workflows
- Opportunities for professional growth and career development

Who Should Apply?

- Passionate individuals with an interest in genetics and genomics
- Graduates or early-career professionals in Biotechnology, Molecular Biology, Genetics, Life Sciences, or related fields
- Motivated learners eager to develop advanced laboratory skills
- Team players with strong attention to detail and scientific curiosity

Why Join Us?

Turn your passion for genetics into tangible discoveries while mastering advanced sequencing workflows. This is your opportunity to contribute to groundbreaking research and build a strong foundation for a successful career in genomics.

Please email your CV including two non-related referees, mentioning the position in the subject line, before
17th September 2026
